

SMOKE CLOAK

With the average break-in lasting just a few minutes, businesses are looking for more ways to protect their sites, goods and people.

WHAT IS A SMOKE CLOAK SYSTEM?

A Smoke Cloak distributes a cloud of fog into the vicinity when activated.

Acting on its own or in conjunction with an intruder alarm system, it can activate in seconds, overcoming those breaking in and making it near impossible to see.

As a proactive measure employed to stop intruders, customers can protect their stock and losses against theft.

BENEFITS OF SMOKE CLOAK SYSTEMS

- Can act as a stand-alone system too, without the need for additional precautions
- Causes minimal disruption during installation
- Extremely fast-acting to stop intruders promptly
- Can be installed in specific areas at high risk of a break-in, for example in display cabinets or safes
-
- Not harmful to the surrounding areas or humans when deployed.

PROTECTING INDUSTRIES

A Smoke Cloak works as an excellent deterrent to thieves, with many industries across the UK making use of them.

If your business has high valuables on-site, or are at risk of a break in, a Smoke Cloak could benefit you. Industries utilising this deterrent include:

- Banks and ATMs
- Jewellers
- Retailers
- Manufacturers and warehouses
- Cash and security service vans
- Education facilities.
