

CASE STUDY

Access Control Installation for Listed Building

Churches Fire & Security works in partnership with a school in Surrey, based out of a Grade 1 Listed Building.

With over 900 students, some of whom are residential, the site required an updated Access Control infrastructure to better serve the needs of the school.

OUR APPROACH AND SOLUTION

Joining Churches as a result of an acquisition, our Technicians and Account Managers have continually maintained fire and security services at the school in accordance with the latest British Standards.

With the requirement of a sophisticated Access Control system, our Projects department proposed the installation of an end-to-end solution to replace the aging building management system.

Working alongside a leading security solutions provider, the chosen system integrated CCTV to allow the school to seamlessly manage the access and security of the premises through a secured monitoring room, with 2 dedicated operators on-site managing the system day-to-day.

Extra care and attention was required due to the age and condition of the Listed Building. The customer was extremely pleased with the high-quality installation being carried out by conscientious and tidy technicians.

BENEFITS OF WORKING WITH CHURCHES FIRE & SECURITY

- ✓ National fire and security protection
- ✓ Compliance assurance
- ✓ Easy access to customer portal
- ✓ Prompt response to call out requests
- ✓ 24/7 alarm monitoring managed in-house at our headquarters
