NURSE CALL SYSTEMS

With three decades of experience in the fire safety and alarm sector, Churches Fire & Security installs, services and maintains a wide range of hard-wired and wireless nurse call alarms across multiple care environments.

Protecting your Residents, Systems and Business

Hard-wired call systems are safe, secure and easy to use. Display monitors enable staff to look at patient data, such as call type, patient name and call location, at a glance.

Wireless systems securely transmit signals without the use of cables. They offer flexibility and mobility, allowing for changes in configuration and expansion.

Planned Preventative Maintenance

Churches Fire & Security offers installation and maintenance of a wide range of products including conventional and addressable systems. Our regular servicing and maintenance contracts ensure that your systems remain in working order, providing your staff and residents with continued peace of mind.

Our Planned Preventative Maintenance (PPM) agreements safeguard against faulty equipment and ensure your alarms meet Care Quality Commission (CQC) standards of compliance. Regular maintenance reduces the risk of call systems malfunctioning, which could be detrimental for residents and costly for the organisation.

Maintenance visits are booked in advance at a time convenient to your organisation and are undertaken with strict professionalism and minimal disruption. Once completed, you will be sent a maintenance report alerting you to any recommended repairs or alterations to your system, which can be completed at your earliest convenience.

In choosing Churches Fire & Security to install your nurse call alarms you can receive the added benefit of our fire safety services. Our technicians are able to service your fire alarms and nurse call alarms in one visit, saving you time, money, and minimising disruption to your organisation.
