

CASE STUDY

FIRE PROTECTION FOR TWO CREMATORIUMS

These crematoriums are part of a national group which are leading developers and operators of crematoria and cemeteries in the UK, conducting over 40,000 funerals per year.

OUR TRUSTED SOLUTIONS

The crematoriums are based in the south of the UK, in traditional chapels providing exemplary service.

A custom fire alarm system was necessary to be installed here. Due to the procedures and equipment that all take place on site, there is potentially a high fire risk.

THE PROJECT

We were contracted to work on this pair of crematorium buildings during a very sensitive and busy period, the pandemic. For this job, all equipment was to be installed out-of-hours to avoid any disruption which meant working during weekends and ensuring nothing was left unfinished or a hazard.

For this to happen, it took thorough planning in order to not disturb the working of either crematorium. On this project, we completed the installation of the state-of-the-art fire alarm over several weekends.

BENEFITS OF WORKING WITH CHURCHES FIRE & SECURITY

- ✓ National Fire and Security Protection
- ✓ Compliance assurance to British Standards
- ✓ Transparency and visibility through our customer portal
- ✓ Prompt response to call out requests
- ✓ 24/7 alarm monitoring managed in-house at our headquarters
- ✓ Technology-enabled communications
- ✓ Swift rectification of issues

SERVICE & MAINTENANCE

Servicing of fire safety system is important in any non-domestic building to ensure compliance to British Standards and safety.

In this particular setting, it was crucial that the system was fully working at all times and there was very minimal chance of false activations due to the sensitivity of the site.
